Report overview and evidence protocol

Summary

This report compares FIFA.com and Chess.com as web experiences with opposite interaction centers. FIFA.com is browse-first: users browse, compare, follow, verify, and hand off to FIFA+ for video.

Chess.com is action-first: users play, review, analyze, train, and enter competitive flows.

Team ownership and product scope

Scope	Primary contributor	Reviewer
F-UC1, F-UC2, F-HCI1 to F-HCI5	Nguyen Vu Bach	Le Minh
F-UC3, F-UC4, F-UC5, F-HCI6 to F-HCI10	Le Minh	Nguyen Vu Bach
C-UC1, C-UC2, C-HCI1 to C-HCI5	Pham Nguyen Gia Bao	Trang Minh Nhut
C-UC3, C-UC4, C-UC5, C-HCI6 to C-HCI10	Trang Minh Nhut	Pham Nguyen Gia Bao

Product selection

Product	Positioning
FIFA.com	Browse-first football web ecosystem for official news, match-following, rankings, tournament discovery, ticketing trust, and FIFA+ watch handoff.
Chess.com	Action-first chess web platform for games, review, self-analysis, puzzles, lessons, study plans, tournaments, and fair-play-guided competitive play.

Users, contexts, and use cases

Primary interactive users

Product	Persona	Goal	Context	Friction
FIFA	F-P1 Casual football fan	Check fixtures, live scores, results, and short news quickly.	Mobile phone or short break; interrupted attention.	Slow path to match information.
FIFA	F-P2 Tournament follower	Follow tournament pages, teams, fixtures, standings, rankings, and media.	Desktop at home or office; high scan pressure.	Too many tournament links to compare.
FIFA	F-P3 Media/student researcher	Find official football news, tournament history, ticket status, and reliable source trails.	Laptop research session; trust-sensitive.	Unclear source path across FIFA properties.
Chess.com	C-P1 Beginner learner	Start a simple game, learn rules, solve easy puzzles, and follow a study plan.	Home or school; low domain knowledge.	Feature overload before knowing chess terms.
Chess.com	C-P2 Competitive player	Start rated games quickly and monitor clock, moves, rating, and opponent status.	Focused desktop play; motor accuracy and low delay.	Delay or mis-tap under time pressure.
Chess.com	C-P3 Returning player	Play a daily or quick game, read content, review mistakes, and continue learning.	Interrupted home use; needs recognition and lightweight feedback.	Forgets feature locations and analysis meanings.

Use cases

Product	Use cases	Evidence	Core HCI idea
FIFA	F-UC1 Find today match schedule; F-UC2 Check live score/result; F-UC3 Read football news article; F-UC4 Find tournament information; F-UC5 Search team/player/article/tournament.	F-01 to F-10B, F-08A	Information scent; visibility of status; trust; continuity; scan load.
Chess.com	C-UC1 Start quick online chess game; C-UC2 Solve a puzzle; C-UC3 Learn a beginner lesson; C-UC4 Review game/analysis; C-UC5 Read content and plan learning.	C-01 to C-08, C-06M, C-04A	Direct manipulation; Feedback; Error prevention; Progressive disclosure; User control.

FIFA.com observed web captures

Figure F-01. FIFA.com home hierarchy

Analysis

- Related persona/task: F-P1 casual fan enters FIFA.com during a short break to find matches and headlines.
- What the image shows: hero content, countdown, match strip, and article blocks compete for first-view attention.
- HCI reading: visual hierarchy splits attention between promotional content and task entry.
- Impact: low-attention users may scroll or choose the wrong route before Match Centre.
- Design implication: keep common tasks such as Scores, News, Rankings, Tickets, and Watch visible near the first view.

Figure F-02. FIFA.com desktop navigation

Analysis

- Related persona/task: F-P1 and F-P2 use top navigation for Match Centre, News, Rankings, and Tickets.
- What the image shows: key official labels remain visible in the header.
- HCI reading: Recognition over recall helps users choose known task labels instead of remembering URLs.
- Benefit: faster first step for schedule, ranking, ticket, and news tasks.
- Limit: More and sibling properties still expand the navigation map.

FIFA.com observed web captures

Figure F-03. FIFA.com mobile navigation

Analysis

- Related persona/task: F-P1 uses mobile in public transport or campus contexts with interrupted attention.
- What the image shows: compact mobile header plus promotional overlay over page content.
- HCI reading: Progressive disclosure saves space, but the overlay adds an interruption before match tasks.
- Impact: the capture supports mobile interruption better than pure navigation structure.
- Suggested recapture: open mobile menu and capture the menu list after closing the popup.

Figure F-04. FIFA.com Match Centre

Analysis

- Related persona/task: F-UC1 and F-UC2, checking today fixtures, live scores, or results.
- What the image shows: date rail, search, live toggle, match rows, sort, and filter controls.
- HCI reading: Visibility of system status and date-based mental model support fixture scanning.
- Benefit: users can anchor the task around day, competition, and live state.
- Risk: sparse or slow client-rendered rows still create waiting and retry behavior.

FIFA.com observed web captures

Figure F-05. FIFA.com search and discovery

Analysis

- Related persona/task: F-P3 researcher searches teams, players, articles, or tournaments.
- What the image shows: search query, content-type filters, result cards, dates, and mixed content results.
- HCI reading: search supports error recovery, but category separation is weak for mixed results.
- Impact: official lookup can still require comparing articles, videos, and documents in one list.
- Design implication: separate team, tournament, article, media, and ticket results with stronger headings.

Figure F-06. FIFA.com news article page

Analysis

- Related persona/task: F-P2 reads official tournament news; F-P1 may jump from news to scores.
- What the image shows: article hero, large visual block, language area, and reading surface.
- HCI reading: reading load and scan load increase when users need a quick linked task.
- Drawback: browse-first article pages make utility actions such as scores or tickets a second jump.
- Design implication: add article utility rail or contextual chips for Match Centre, Tickets, and Watch.

FIFA.com observed web captures

Figure F-07. FIFA.com tournament page

Analysis

- Related persona/task: F-P2 follows tournament pages, teams, standings, and media.
- What the image shows: tournament subnavigation plus a promotional modal over the page.
- HCI reading: information architecture groups competition content, but overlays interrupt scanning.
- Impact: this capture is strong for interruption, weaker for tournament details until the modal is closed.
- Suggested recapture: close the modal and capture the tournament navigation and page content.

Figure F-08. FIFA.com mobile content density

Analysis

- Related persona/task: F-P1 uses mobile with short attention windows.
- What the image shows: dense mobile content and promotional interruption.
- HCI reading: small screens magnify cognitive load and attention switching.
- Impact: a modal or dense rail can block the quick check the user came for.
- Design implication: defer promotional overlays until after the first successful task.

FIFA.com observed web captures

Figure F-09B. FIFA.com footer and ecosystem navigation

Analysis

- Related persona/task: F-P3 follows official source trails across FIFA pages and sibling destinations.
- What the image shows: footer links, upcoming tournaments, app links, and ecosystem destinations.
- HCI reading: broad ecosystem support helps global users but increases mental model fragmentation.
- Drawback: users can move across FIFA.com, Inside FIFA, FIFA+, Store, Collect, and Rewards.
- Design implication: create clearer task-first global navigation and cross-property breadcrumbs

Figure F-10B. FIFA+ video or media area

Analysis

- Related persona/task: F-P3 moves from FIFA information to FIFA+ watch content.
- What the image shows: DAZN context, FIFA+ hero, sign-up control, media rails, and cookie prompt.
- HCI reading: feedforward exists, but the brand/account boundary can break continuity and trust.
- Drawback: users may pause because the watch path feels like a different service.
- Suggested recapture: accept or hide cookies, then capture visible live/highlight rails.

FIFA.com observed web captures

Figure F-08A. FIFA.com mobile interruption crop

Analysis

- Related persona/task: F-P1 tries to scan live or recent content on mobile.
- What the image shows: crop isolates overlay intrusion on top of match/page content.
- HCI reading: interruption increases motor and memory load on small screens.
- Impact: task state is hidden and users must recover context after closing the overlay.
- Design implication: place promotional prompts after match lookup or make them smaller and dismissible.

Chess.com observed web captures

Figure C-01. Chess.com home page information hierarchy

Analysis

- Related persona/task: C-P1 beginner learner and C-P2 competitive player enter through the home page.
- What the image shows: Play, Puzzles, Learn, Train, Watch, and Community are visible from the start.
- HCI reading: strong information scent supports recognition of core chess tasks.
- Benefit: users see actions without knowing internal feature names.
- Drawback: too many first-level routes can overwhelm beginners.

Figure C-02. Chess.com play entry point

Analysis

- Related persona/task: C-P2 starts a quick online game with default or custom settings.
- What the image shows: board, Start Game control, time control, custom challenge, and friend options.
- HCI reading: flexibility and user control reduce entry friction for competitive players.
- Benefit: fast start path supports short blitz windows.
- Risk: account prompts or setting mismatch can interrupt momentum.

Chess.com observed web captures

Figure C-03. Chess.com game board or demo board

Analysis

- Related persona/task: C-P2 plays or tests a board state; C-P3 reviews board behavior.
- What the image shows: direct board surface, pieces, bot panel, and play controls.
- HCI reading: Direct manipulation matches the physical chess-board mental model.
- Benefit: users act by moving pieces rather than translating commands.
- Risk: side panels and ads compete with board attention.

Figure C-04. Chess.com puzzle page

Analysis

- Related persona/task: C-P1 solves a puzzle and expects learning feedback.
- What the image shows: puzzle board, prompt area, side progress path, and ad space.
- HCI reading: feedback and learnability are central, but layered onboarding increases load.
- Benefit: board supports practice through concrete moves.
- Design implication: puzzle feedback should stay close to the move and avoid blocking the board.

Chess.com observed web captures

Figure C-05. Chess.com Learn page

Analysis

- Related persona/task: C-P1 chooses a beginner lesson or study plan.
- What the image shows: Learn surface, rank/progress area, play prompt, and ads, but the main lesson list is sparse.
- HCI reading: Progressive disclosure is needed because many learning routes appear together.
- Drawback: this capture is weak for actual lesson content and should be retaken after the page fully loads.
- Suggested recapture: use the Lessons page after content cards load.

Figure C-06. Chess.com navigation menu

Analysis

- Related persona/task: C-P1 and C-P3 navigate across Play, Puzzles, Learn, Train, Watch, and Community.
- What the image shows: feature-rich side navigation.
- HCI reading: recognition helps repeat users, but choice overload affects first-time users.
- Drawback: many primary areas compete before a beginner has a learning strategy.
- Design implication: add goal-based onboarding and a personal dashboard with pinned tasks.

Chess.com observed web captures

Figure C-07. Chess.com feedback and move status

Analysis

- Related persona/task: C-P2 plays on mobile with clock and move pressure.
- What the image shows: compact start/settings screen rather than in-game feedback or move status.
- HCI reading: the current image supports mobile setup density, not post-move feedback.
- Impact: this mismatch should be fixed before final submission if C-07 is used for feedback claims.
- Suggested recapture: capture an active game board with clock, last move, legal move feedback, or move status visible.

Figure C-08. Chess.com mobile layout

Analysis

- Related persona/task: C-P3 returns on mobile and needs lightweight recognition.
- What the image shows: compressed feature discovery and account prompts.
- HCI reading: small screens increase memory load because feature categories are hidden or condensed.
- Impact: returning users may forget where review, lessons, or puzzles live.
- Design implication: provide recent task shortcuts and pinned personal actions.

Chess.com observed web captures

Figure C-06M. Chess.com mobile navigation

Analysis

- Related persona/task: mobile users search for core actions through compact controls.
- What the image shows: homepage compressed into a narrow mobile layout.
- HCI reading: Progressive disclosure saves space but weakens discoverability for hidden routes.
- Impact: novice users can miss Learn, Focus Mode, or review paths.
- Suggested recapture: open the mobile menu or sidebar so the hidden navigation choices are visible.

Figure C-04A. Chess.com puzzle prompt crop

Analysis

- Related persona/task: C-P1 studies one puzzle and needs clear next-move feedback.
- What the image shows: board state with highlighted move context.
- HCI reading: dense learning prompts should not obscure the board or increase visual search.
- Benefit: cropped evidence shows the exact task object for feedback.
- Design implication: use short local prompts and progressive explanation after the move.

FIFA benefits and drawbacks summary

ID	Type	Screen/flow	HCI mapping	Main implication
F-HCI1	Benefit	Global navigation	Information scent; Recognition over recall; Efficient task entry	Top task labels help users enter Match Centre, News, Rankings, and Tickets quickly.
F-HCI2	Benefit	All stories and topics	Information foraging; Hierarchical scanning	Topic/category filters support tournament story browsing.
F-HCI3	Benefit	Ticket discovery	Credibility; Error prevention; trust	Official ticket wording helps users avoid unreliable third-party routes.
F-HCI4	Benefit	FIFA+ entry	Feedforward; Clear CTA	Hero and get-started controls explain the next action before watching.
F-HCI5	Benefit	FIFA+ watch rails	Flexibility; Broad retrieval paths	Live, replay, archive, and documentary rails support different watching contexts.
F-HCI6	Drawback	Ecosystem navigation	Context switching; Consistency	Tasks span FIFA.com, Inside FIFA, FIFA+, Store, Collect, and Rewards.
F-HCI7	Drawback	FIFA+ handoff	Continuity break; Trust friction	DAZN branding and account expectations can make the user pause.
F-HCI8	Drawback	FIFA+ browsing	Visual attention; Choice overload	Dense media rails increase scan cost for highlights or archive content.
F-HCI9	Drawback	Ticket status	Visibility of system status	Repeated-check guidance does not show when availability changes.
F-HCI10	Drawback	Story hub	Task interruption; Efficiency gap	Article readers must jump elsewhere for scores, tickets, or watch actions.

Chess.com benefits and drawbacks summary

ID	Type	Screen/flow	HCI mapping	Main implication
C-HCI1	Benefit	Homepage	Information scent; Task signposting	Core actions are visible even before users know feature names.
C-HCI2	Benefit	Start game flow	Flexibility; User control	Players can start quickly or adjust time control before matching.
C-HCI3	Benefit	Focus Mode	Attention support; Reduced clutter	Distraction reduction helps serious play when discovered.
C-HCI4	Benefit	Game Review	Feedback; Reflection; Error recovery	A finished game becomes actionable learning through classifications and retry.
C-HCI5	Benefit	Analysis Board	Direct manipulation; Expert control	Users can set up positions, load FEN/PGN, and compare lines.
C-HCI6	Benefit	Study Plans	Progressive disclosure; Guidance	Beginner training becomes less ambiguous through curated plans.
C-HCI7	Drawback	Product surface	Choice overload	Beginners see too many primary routes before knowing the best sequence.
C-HCI8	Drawback	Premove	Speed vs accuracy; Error risk	Queued legal moves can become bad after an unexpected reply.
C-HCI9	Drawback	Focus discovery	Discoverability; Hidden controls	Hover-only controls mean some users never find Focus Mode.
C-HCI10	Drawback	Analysis screens	Cognitive load; Expectation mismatch	Charts, lines, classifications, and gates can overwhelm review tasks.

Comparison

Dimension	FIFA.com	Chess.com
Task type	Browse, compare, follow, verify, then hand off to FIFA+ for video.	Do, review, analyze, train, and enter competitive flows.
Target users	Fans checking official football information, tickets, rankings, and video.	Players who want fast games, feedback, training, and fair competitive play.
Information scent	Strong for official labels; weaker when tasks cross properties.	Strong action labels on homepage and support flows.
Learnability	Easy for news/rankings; ticket and watch handoff need clearer status.	Easy to start; analysis and training depth require guidance.
Cognitive load	Browse surfaces and rails can become dense.	Feature breadth and analysis controls can overwhelm novices.
Error risk	Wrong ticket source or lost context during handoff.	Queued premove, hidden Focus Mode, and access-limit interruptions.
Best next solution	Task-first navigation, handoff explainer, ticket dashboard, article utility rail.	Goal-based onboarding, beginner analysis preset, premove preview, Focus coachmark.

Difficulty

ID	Product	Difficulty	Severity	Connected solution direction
F-D1	FIFA	Ecosystem sprawl across sibling FIFA properties	High	Task-first global navigation and intent chips.
F-D2	FIFA	FIFA+ handoff breaks continuity	High	Handoff explainer and cross-property breadcrumb.
F-D3	FIFA	FIFA+ scan overload	Medium	Media category chips and clearer rails.
F-D4	FIFA	Ticket status uncertainty	High	Ticket status dashboard and official alerts.
F-D5	FIFA	Browse-first friction for quick utilitarian tasks	Medium	Article utility rail and contextual task links.
C-D1	Chess.com	Menu and feature overload for novices	High	Goal-based onboarding and personal dashboard.
C-D2	Chess.com	Analysis overload	High	Beginner analysis preset and inline glossary.
C-D3	Chess.com	Premium gating interrupts learning momentum	Medium	Preview limits and clear access labeling.
C-D4	Chess.com	Premove blunder risk	High	Premove queue preview and fast clear shortcut.
C-D5	Chess.com	Focus Mode is hard to discover	Medium	Focus Mode coachmark and visible entry.
