

Hi-fi Prototype

FIFA Status Dashboard + Chess Beginner Review Flow

YOUTUBE DEMO LINK

YouTube demo link: REQUIRED EXTERNAL EVIDENCE BEFORE SUBMISSION

A coded, offline demonstrator carrying the selected PA3 directions into a polished, testable interface. Fictional data is labeled and no live service completion is claimed.

Product	Selected PA3 base	PA4 focus
FIFA	Alt 1 · Status Dashboard	Status → owner → action → handoff
Chess	Alt 1 · Beginner Review Flow	Mistake → consequence → try → practice

FIFA Status Dashboard

The FIFA surface keeps fictional status, owner, freshness, action adjacency, and the partner boundary visible.

Figure: fifa desktop overview

- Select Pending or Confirmed event rows.
- Reveal the Pending definition and next owner.
- Open order or ticket detail and save the confirmed event.
- Preview the partner destination, stay or continue, and return with context.
- Presenter mode retains reset and unavailable-state preview for QA; study mode removes researcher controls.

Figure: fifa desktop handoff

Chess Beginner Review Flow

The validated Chess scenario checks Qh5: Nxh5 captures the queen. The revealed alternative is Qe2; the related practice move is Qd3. Check an opponent's attack before moving a valuable piece.

Figure: chess desktop mistake

- Intro hides the exact mistake and answer.
- Mistake state reveals the immediate consequence before the better move.
- Trial requires selecting a source piece and destination; wrong moves provide feedback and retry.
- Practice uses a new validated micro-position and requires the same two-step input.
- Completion provides a return path without claiming engine or live-service behavior.

Study routes and responsive validation

Route	URL
FIFA study	?mode=study&product=fifa#fifa
Chess study	?mode=study&product=chess#chess
Viewport	Validated behavior
1440 × 900	Product hierarchy, rail guidance, board interaction, and primary controls remain usable.
390 × 844	Columns stack, the board remains readable, controls wrap, and no horizontal overflow is expected.
Study mode	Researcher branding, launcher, reset/preview controls, and demo help are removed from the participant DOM.
Presenter mode	Launcher, demo labels, help, reset, and unavailable-state preview remain available for QA.

Limitations and external evidence

BLOCKED EXTERNALLY

A genuine YouTube demo URL, real participant sessions, verified recordings, questionnaire/interview evidence, and measured task timings are not local facts. The prototype is locally runnable and browser-tested, but it does not use live backends.
