

PROJECT ASSIGNMENT 2

Internal Instructor-Style Review

Group10 | FIFA.com and Chess.com | Final PA2 document review

This review is an internal instructor-style evaluation prepared to check the PA2 deliverables against the assignment requirements. It is not presented as recorded lecturer feedback.

1. Review Summary

The five main reports provide strong coverage of PA2 Requirements 1-4 and 6, with clear continuity from PA1, explicit research and analysis artifacts, six differentiated concepts, detailed use-case specifications, and a complete three-week process record. The main remaining concern is final consistency: captions must stay within visible evidence, voting values and charts must agree, proposal concepts must map cleanly to use-case or flow visuals, and TOC fields, pagination, tables, and diagrams must be checked after export.

2. Comments and Team Responses

Commenter	Feedback / Question	Group Response	Revision / Action
Simulated Instructor Reviewer	Research structure is complete, but screenshot claims must always match visible pixels.	The team checked captions and limited claims to visible states.	Keep corrected FIFA ticket and pre-handoff captions.
Simulated Instructor Reviewer	Affinity synthesis is clear, but voting totals and charts must remain consistent.	The team cross-checked member totals and visualization values.	Correct any mismatch before final export.
Simulated Instructor Reviewer	The six alternatives satisfy the requirement for different concepts. Guided Concierge is detailed enough when branch and recovery flows are included.	The team keeps Status Dashboard as the recommendation and Guided Concierge / Alert-First Planner as parallel alternatives.	No major expansion needed.
Simulated Instructor Reviewer	Use-case specifications are strong and include alternate/error paths. Ensure conceptual solutions are represented by use-case diagrams or flow models as required by the brief.	The team checks mapping from all six proposal concepts to the use-case/flow section.	Keep final diagrams and mappings consistent.
Simulated Instructor Reviewer	The three-week process and member contributions are clear. TOC and page numbers must match the final document.	The team updates fields before export.	Refresh TOC.

Commenter	Feedback / Question	Group Response	Revision / Action
Simulated Instructor Reviewer	Large tables and diagrams should remain readable at normal page size.	The team uses landscape or split tables where needed.	Verify final pagination before export.
Simulated Instructor Reviewer	The practical difficulties section is useful because it shows what changed during the project.	The team keeps concise examples from screenshot validation, long-page layout, affinity synthesis, and prototype revision.	Keep section concise.
Simulated Instructor Reviewer	The project shows clear continuity from PA1 to two focused PA2 problems and is well prepared for PA3 prototyping.	The team will validate the selected concepts in PA3.	Carry PA3 validation questions forward.

3. Overall Evaluation

- User Research: strong coverage of methods, simulated participants and sessions, personas, screenshot evidence, work models, and PA1 continuity.
- User Analysis: clear synthesis from brainstorming and affinity clustering through voting, prioritization, and two tough problems.
- Proposal: sufficiently differentiated alternatives, with three concepts for FIFA and three for Chess.
- Use Case: detailed and traceable, with actors, system boundaries, main flows, and alternate/error paths.
- Weekly Report: complete three-week process record with task ownership, continuity, progress, and lessons learned.
- Main remaining risk: cross-document consistency and final document QA, especially captions, voting values, mappings, TOC fields, and pagination.
