

PROJECT ASSIGNMENT 2

Group10-PA2 Peer Review

Internal / simulated peer review for design QA

FIFA.com and Chess.com

Course	CSC13112 - UI/UX Design, FIT-HCMUS
Group	Group10
Team	Le Minh (21127645); Nguyen Vu Bach (21127224); Pham Nguyen Gia Bao (20127119); Trang Minh Nhut (22127318)
Scope	Internal / simulated peer review for design QA

Contents

Contents	2
INTERNAL / SIMULATED PEER REVIEW FOR DESIGN QA	3
QA-01 - FIFA mobile ticket cards	3
QA-02 - Chess mobile lessons	4
QA-03 - Guided Concierge question step	4
QA-04 - Ticket destination handoff	5
QA-05 - Use-case document	5
QA-06 - Shared state feedback	6
QA-07 - Mobile controls	6
Evidence excerpts	6
Practical Difficulties and Lessons Learned	11

INTERNAL / SIMULATED PEER REVIEW FOR DESIGN QA

Review boundary: No verified presentation feedback is available. The items below are an internal, simulated review of visible screenshots, diagrams, and report pages. They are not presented as comments from external peers.

QA-01 - FIFA mobile ticket cards

Field	Review record
Screen or artifact	FIFA mobile ticket cards
Issue	The selected tournament can move below a long vertical card stack.
Severity	High
Reason	The mobile capture shows repeated stacked cards before later options.
Recommendation	Keep the selected tournament and current state in a compact summary.
Affected report	Project Proposal; Use Case Document
Action taken	Added persistent context to the Concierge and F-UC01 visual.
Result after revision	The next decision remains visible after filters change.

QA-02 - Chess mobile lessons

Field	Review record
Screen or artifact	Chess mobile lessons
Issue	The long lesson list makes the next beginner task hard to locate.
Severity	Medium
Reason	The capture shows many lesson groups in one vertical sequence.
Recommendation	Place one Continue lesson action before the catalog.
Affected report	User Research; User Analysis
Action taken	Added a learning-priority step to the Chess work model.
Result after revision	The model leads to one lesson or puzzle before advanced depth.

QA-03 - Guided Concierge question step

Field	Review record
Screen or artifact	Guided Concierge question step
Issue	Required tournament and email input lacked a defined validation response.
Severity	High
Reason	The earlier low-fidelity screen listed fields but no field-level error or recovery.
Recommendation	Add inline message, preserve valid answers, and provide a correction action.
Affected report	Project Proposal; Use Case Document
Action taken	Added validation screen and state contract.
Result after revision	The user can correct one field without restarting.

QA-04 - Ticket destination handoff

Field	Review record
Screen or artifact	Ticket destination handoff
Issue	The partner boundary was not explained before Continue.
Severity	High
Reason	Existing ticket captures show an outbound action and a later partner state.
Recommendation	Preview domain, account expectation, and return behavior.
Affected report	Project Proposal; Use Case Document
Action taken	Added destination preview and Continue/Stay decision.
Result after revision	The handoff identifies what changes and what context remains.

QA-05 - Use-case document

Field	Review record
Screen or artifact	Use-case document
Issue	A repeated overview image would not prove twelve distinct task states.
Severity	Medium
Reason	The use cases have different triggers and outputs.
Recommendation	Use a different UI state for every use case.
Affected report	Use Case Document
Action taken	Added twelve unique use-case visuals beside their specifications.
Result after revision	Each visual now matches its trigger and primary action.

QA-06 - Shared state feedback

Field	Review record
Screen or artifact	Shared state feedback
Issue	Color alone would not distinguish status, error, and success.
Severity	High
Reason	Status chips and error panels use related accent colors.
Recommendation	Pair color with a state label, message, action, and recovery.
Affected report	Project Proposal; Use Case Document
Action taken	Added text labels to every state card.
Result after revision	The state meaning remains available without relying on color.

QA-07 - Mobile controls

Field	Review record
Screen or artifact	Mobile controls
Issue	The source screenshots do not provide a reliable pixel measurement for every tap target.
Severity	Medium
Reason	Screenshot scaling prevents a defensible size claim.
Recommendation	Set a design rule instead of claiming the current controls fail.
Affected report	Project Proposal
Action taken	Specified 48 px button height and persistent labels.
Result after revision	The concept has a measurable mobile acceptance rule.

Evidence excerpts

Figure PR-EV-01A. Chess mobile Lessons page - Top; the first visible learning groups.

Practical Difficulties and Lessons Learned

Record 1

Practical difficulty	No verified presentation feedback existed.
How the group handled it	The group changed the artifact title and disclosure to internal/simulated design QA.
Lesson learned	Feedback provenance must be explicit.
Impact on the final version	The final review does not attribute comments to external peers.

Record 2

Practical difficulty	Some review claims could not be measured from scaled screenshots.
How the group handled it	The group converted them into measurable design requirements instead of unsupported findings.
Lesson learned	Evidence limits should change the wording of a review item.
Impact on the final version	Tap targets now have a 48 px concept rule without claiming a measured defect in the source.
