

PROJECT ASSIGNMENT 1 (PA1)

FIT-HCMUS - CSC13112 - UI/UX Design - Dr. Le Khanh Duy

Deadline: Please check the submission link on Moodle.

Total points: **75/500**

This is a teamwork assignment.

PA Schedule

PA	PA (500, subject to change later)
<u>PA1</u>	<u>75</u> <u>Product Research</u> <u>Potential Solutions</u>
PA2	100 User Research, Vision Document Use Case Spec
PA3	150 Paper Prototype (2 scenario * 3 alternatives) Informal testing Points for improvements
PA4	175 Hi-fi Prototype Summative user study Presentation / Demo

A. Objectives

In this PA, students are asked to form project groups, survey existing products, then define your project problems, initially analyze and propose solutions.

B. Requirements

Requirement 0: Group Registration

Students are asked to form groups of 4-5 students each and fill in the group information on a Google Sheet.

Requirement 1: Existing Products Research

This year's topics are learning and sports.

Groups are asked to choose 2 real-world products related to **sports** and analyze them.

The products can run on web environments, mobile phones, smartwatches, public displays, or any computing devices, etc. A product related to sports could be a computing device or an app helping people in play sports or simply an online portal where people can read, watch or listen to sport news. Sports here can also cover e-sports but you should not choose complex games like PUBG, or MOBAs or ARTS games like Dota, League of Legends. If you choose e-sports, you are encourage to choose games related to physical sports like football/soccer, chess, etc.

Write an analysis report about these products from user interaction and experience perspectives based on fundamental HCI concepts that the groups have learned so far (human capabilities, user mental models, interaction metaphors, usability).

Groups should answer the following questions:

- Name and domain of the product.
- Who are the users?
- Some core use cases of the product (describe in detail the context of each use case such as where, when, situations of users (sitting, standing, lying, running, etc.), and methods of user interaction with the product via its interface).
- Analyze the benefits and drawbacks of the product's interface based on fundamental HCI concepts.
- Consider different types of users who might use this application and possible contexts where difficulties and hindrances might occur with the given interfaces and interactions that the products currently provide.

When analyzing the benefits or drawbacks of the product's interface, illustrate with very concrete and specific use cases. For example, if a certain screen requires the user to scroll unnecessarily to tap a button due to an unreasonably stretched-out interface, explain why. Or if an application automatically saves the current page of the book the user is reading but does not provide any feedback, making the system not informative about the status to the user, describe this scenario. **DO NOT DESCRIBE THE BENEFITS OR DRAWBACKS IN GENERIC AND SUPERFICIAL WAYS.**

Requirement 2: Potential Solutions Identification

Based on the above research, groups should write a brief description proposing several solutions for the mentioned drawbacks. These solutions should be practical, innovative, and aligned with the fundamental HCI principles learned in class. For each drawback identified, provide a detailed explanation of how your proposed solution addresses the issue.

Requirement 3: Peer Review

Groups are required to present their work during lecture sessions, within a 5 to 10-minute timeframe.

After the presentation, lecturers and other group members will provide feedback.

Groups must document the feedback and questions in a report, including the name of the commenter, the feedback or question, and the group's responses.

They will then have several days to revise the project requirements before submitting the final version on Moodle.

Requirement 4: Weekly Report

Groups must track each member's tasks using the provided weekly report template.

C. Grading Scheme

- Requirement 1: Product research (60%)
- Requirement 2: Potential Solutions Identification (25%)
- Requirement 3: Peer Review (10%)
- Requirement 4: Weekly report (5%)

D. Documents to be submitted

- Requirement 1: GroupID-PA1-ProductResearch.pdf
- Requirement 2: GroupID-PA1-PotentialSolutions.pdf
- Requirement 3: GroupID-PA1-PeerReview.pdf
- Requirement 4: GroupID-PA1-WeeklyReport.pdf

Submission name: **GroupID-PA1.zip**
