

PROJECT ASSIGNMENT 2

Group10-PA2 Project Proposal

Two bounded modules, six alternatives, weighted recommendation, and PA3 test plans

FIFA.com and Chess.com

Course	CSC13112 - UI/UX Design, FIT-HCMUS
Group	Group10
Team	Le Minh (21127645); Nguyen Vu Bach (21127224); Pham Nguyen Gia Bao (20127119); Trang Minh Nhut (22127318)
Evidence date	Local evidence audited through 30 July 2026
Document type	Evidence-based redesign report
Status	FINAL - simulated-study evidence explicitly labeled

Contents

Contents	2
1. Proposal scope and traceability	3
2. FIFA Ticket Confidence Module alternatives	3
2.1 F-A1 Status Dashboard	3
2.2 F-A2 Guided Concierge	4
2.3 F-A3 Alert-First Planner	5
3. Chess Guided Beginner Review Module alternatives	6
3.1 C-A1 Beginner Review Preset	6
3.2 C-A2 Conversational Coach	7
3.3 C-A3 Visual Game Story	8
4. Weighted comparison method	8
5. Recommendations and retained alternatives	10
6. PA3 parallel-prototyping plan	10
7. Course-source application	10

1. Proposal scope and traceability

- FIFA Ticket Confidence Module: Users need to compare current ticket state, freshness and official destination before leaving FIFA.com.
- Chess Guided Beginner Review Module: Beginners need one interpretable mistake and one next practice action before advanced analysis.

Screen evidence: F2-E03/E04/E09 and C2-E05/E07-E10 bound the visible interface claims.

Simulated study: Scenario records inform hypothesis coverage only; no expected benefit is an observed outcome.

Design inference: The modules preserve current products and introduce bounded decision/learning layers.

2. FIFA Ticket Confidence Module alternatives

2.1 F-A1 Status Dashboard

Field	Record
Concept	Status Dashboard within FIFA Ticket Confidence Module
Target user	Trust-sensitive ticket planners
Task flow	Choose context -> compare states -> inspect freshness -> preview official destination -> act or stay
Main screen	Status comparison dashboard
Interaction	Filter, expand provenance, preview handoff, save/alert
Problem coverage	Directly covers status, freshness, and destination confidence
Accessibility	Text labels, table semantics, keyboard order, color-independent states
Privacy	Minimize saved preferences; explicit alert consent
Data dependency	Governed ticket-state feed, timestamps, partner metadata
Failure recovery	Keep last timestamped state, distinguish missing/stale, retry without losing context
Risk	Feed inconsistency or false confidence
Tradeoff	Highest clarity; requires reliable governed data
PA3 test plan	Test state interpretation, destination recognition, stay/continue choice, and recovery

PP-F-A1 Status Dashboard Flow

Breakdowns / decision risks

- Screen evidence
- Simulated study
- Design inference
- PA3 validation target

Related: Test state interpretation, destination recognition, stay/continue choice, and recovery

2.2 F-A2 Guided Concierge

Field	Record
Concept	Guided Concierge within FIFA Ticket Confidence Module
Target user	Infrequent and first-time planners
Task flow	State intent -> answer questions -> receive route -> preview destination -> confirm
Main screen	Step-by-step concierge
Interaction	Single-choice questions, back/edit, recommendation rationale
Problem coverage	Covers complex choice and handoff confidence
Accessibility	Progress, plain labels, keyboard/radio semantics
Privacy	Avoid sensitive profiling; delete draft answers
Data dependency	Eligibility rules, ticket channels, partner metadata
Failure recovery	Explain unsupported markets, preserve answers, offer dashboard
Risk	Long flow and rule maintenance
Tradeoff	More guidance; slower comparison
PA3 test plan	Test completion, backtracking, recommendation comprehension, and unsupported-state recovery

PP-F-A2 Guided Concierge Flow

Figure PP-F-A2. Guided Concierge task-flow model
Source: Design inference based on TP-FIFA
Related: Test completion, backtracking, recommendation comprehension, and unsupported-state recovery

2.3 F-A3 Alert-First Planner

Field	Record
Concept	Alert-First Planner within FIFA Ticket Confidence Module
Target user	Followers waiting for sale changes
Task flow	Follow context -> set preference -> wait -> receive verified change -> open destination
Main screen	Saved-plan and alert center
Interaction	Follow, consent, edit, snooze, stop, open alert
Problem coverage	Covers freshness and return; weaker immediate comparison
Accessibility	Channel alternatives, readable timestamps, no color-only urgency
Privacy	Explicit permission, minimal contact data, retention limit
Data dependency	Change events, notification channel, partner metadata
Failure recovery	Retain local plan if permission denied; retry irrelevant or failed alerts
Risk	Notification fatigue and delayed data
Tradeoff	Strong return support; depends on alert quality
PA3 test plan	Test permission denial, alert relevance, freshness comprehension, and return context

PP-F-A3 Alert-First Planner Flow

Related: Test permission denial, alert relevance, freshness comprehension, and return context

3. Chess Guided Beginner Review Module alternatives

3.1 C-A1 Beginner Review Preset

Field	Record
Concept	Beginner Review Preset within Chess Guided Beginner Review Module
Target user	First-time and returning low-analysis learners
Task flow	Open game -> select preset -> identify one mistake -> try move -> read explanation -> practice or depth
Main screen	Primary mistake card beside board
Interaction	Try move, reveal why, continue practice, reveal advanced detail
Problem coverage	Directly covers one interpretable mistake and next practice action
Accessibility	Keyboard board alternative, focus order, plain language, color-independent evaluation
Privacy	Use only selected game; explain retention and sharing
Data dependency	Game artifact, analysis service, explanation rules, learning catalog
Failure recovery	Handle no game, invalid PGN, engine unavailable, no major mistake, restriction
Risk	Oversimplification or incorrect explanation
Tradeoff	Strongest beginner interpretation; constrains initial depth
PA3 test plan	Test mistake comprehension, move trial, practice selection, and depth disclosure

PP-C-A1 Beginner Review Preset Flow

Related: Test mistake comprehension, move trial, practice selection, and depth disclosure

3.2 C-A2 Conversational Coach

Field	Record
Concept	Conversational Coach within Chess Guided Beginner Review Module
Target user	Beginners who prefer question-led guidance
Task flow	Open review -> state intent -> coach clarifies -> explain position -> try move -> practice
Main screen	Conversation plus board
Interaction	Choose intent, ask why, try move, request another explanation
Problem coverage	Covers interpretation and vocabulary
Accessibility	Structured choices, transcript headings, keyboard board alternative
Privacy	Do not collect unrelated personal data; clear conversation retention
Data dependency	Game artifact, explanation service, learning catalog
Failure recovery	Offer fixed explanation cards if the coach service fails
Risk	Inconsistent wording and longer interaction
Tradeoff	Flexible explanation; harder to validate
PA3 test plan	Test response consistency, vocabulary comprehension, and service fallback

PP-C-A2 Conversational Coach Flow

Figure PP-C-A2. Conversational Coach task-flow model
Source: Design inference based on TP-CHESS
Related: Test response consistency, vocabulary comprehension, and service fallback

3.3 C-A3 Visual Game Story

Field	Record
Concept	Visual Game Story within Chess Guided Beginner Review Module
Target user	Returning learners who scan game turning points
Task flow	Open review -> view chapters -> inspect turning point -> replay chance -> choose next action
Main screen	Chapter timeline with board snapshots
Interaction	Scrub chapters, select turning point, replay, continue
Problem coverage	Covers prioritization and narrative continuation
Accessibility	Text chapter list, reduced motion, keyboard timeline
Privacy	Use game data only; respect game visibility
Data dependency	Game segmentation, analysis service, learning catalog
Failure recovery	Fall back to a single mistake card if segmentation fails
Risk	Long games and multiple comparable mistakes
Tradeoff	Strong overview; less direct for first-time beginners
PA3 test plan	Test turning-point recognition, replay accuracy, and continuation choice

PP-C-A3 Visual Game Story Flow

Breakdowns / decision risks

Figure PP-C-A3. Visual Game Story task-flow model
Source: Design inference based on TP-CHESS
Related: Test turning-point recognition, replay accuracy, and continuation choice

4. Weighted comparison method

Formula: Weighted score = Problem coverage x 30% + Learnability x 20% + Accessibility x 15% + Recovery x 15% + Data feasibility x 10% + PA3 testability x 10%. Factors use 1-5; maximum is 5.00.

Alternative	Coverage 30%	Learnability 20%	Accessibility 15%	Recovery 15%	Data 10%	PA3 10%	Weighted	Reason
F-A1 Status Dashboard	5	4	5	5	3	5	4.55	Direct comparison and recovery; reliable feed is the main dependency.
F-A2 Guided Concierge	4	5	4	4	3	4	4.05	High guidance but a longer flow and heavier rule maintenance.
F-A3 Alert-First Planner	3	4	4	4	3	4	3.65	Strong freshness/return support but weaker immediate comparison.
C-A1 Beginner Review Preset	5	5	5	5	4	5	4.90	Best alignment to one mistake, move trial, explanation, and practice.
C-A2 Conversational Coach	4	5	4	3	2	3	3.75	Flexible but consistency, service fallback, and validation are harder.
C-A3 Visual Game Story	4	4	4	4	3	4	3.90	Good overview but less direct for a first-time beginner.

5. Recommendations and retained alternatives

Recommendation - FIFA: Select Status Dashboard because it most directly combines ticket state, freshness, official destination preview, user control, and recovery. Guided Concierge and Alert-First Planner remain PA3 parallel prototypes.

Recommendation - Chess: Select Beginner Review Preset because it establishes one interpretable mistake and one next practice action before advanced depth. Conversational Coach and Visual Game Story remain PA3 parallel prototypes.

Recommendation	Reason	Principal risk	PA3 validation target
F-A1 Status Dashboard	Highest weighted FIFA score and strongest tough-problem coverage	Stale or conflicting governed data	Accurate state/freshness interpretation and calibrated handoff confidence
C-A1 Beginner Review Preset	Highest weighted Chess score and clearest learning priority	Oversimplification or explanation error	Mistake comprehension, better-move trial, and relevant practice choice

6. PA3 parallel-prototyping plan

Product	Parallel concepts	Common scenario	Measures	Stop/iterate rule
FIFA	Status Dashboard; Guided Concierge; Alert-First Planner	Compare a missing/stale ticket state and decide whether to leave FIFA.com	State accuracy; destination recognition; confidence calibration; recovery	Reject a concept that causes state misinterpretation or implies partner completion
Chess	Beginner Review Preset; Conversational Coach; Visual Game Story	Open a completed game, identify one mistake, try a better move, continue practice	Explanation accuracy; wrong path; continuation relevance; depth control	Reject a concept that hides correction, blocks keyboard use, or overstates certainty

PA3 validation target: Expected benefits remain hypotheses until prototype sessions produce observed evidence.

7. Course-source application

Course basis: LN01 - Introduction - v2.pdf, pp. 20, 22, 24; LN02 - Fundamental Concepts - Usability Dimensions_2.pdf, pp. 62-67, 74-76, 83-84, 101-115; LN03 - UI Design Process.pdf, pp. 16-19, 23-24, 28-30, 34-36; LN04 - Task Analysis.pdf, pp. 3, 6-15, 39-49.
