

GroupID-PA1 Peer Review: Strava and Nike Run Club

Presentation plan

The 7-minute peer-review presentation explains why the team compares Strava and Nike Run Club, how the evidence protocol works, what personas and contexts reveal, and which solution priorities should be challenged by reviewers.

Slide	Topic	Purpose	Speaker	Time
1	PA1 scope and chosen product pair	State Strava and Nike Run Club scope	Member1	0:45
2	Method and evidence protocol	Explain official-source-first citations	Member1	0:55
3	Personas and use contexts	Show six personas and motion contexts	Member2	1:00
4	Strava HCI findings	Record, privacy, route, segment, challenge risks	Member3	1:10
5	Nike Run Club HCI findings	Audio guidance, plans, challenges, live sharing, metrics	Member4	1:10
6	Solution priorities	Explain quick wins and deeper redesigns	Member4	1:10
7	Sprint plan and QA status	Show validation and packaging	Member5	0:50

7-minute script

Member1 opens with the product pair and evidence rule. Member2 explains personas as motion-and-context models. Member3 covers Strava benefits and risks. Member4 covers Nike Run Club benefits, drawbacks, and solution priorities. Member5 closes with sprint QA, source validation, PDF regeneration, and zip package status.

Likely questions and prepared answers

Slide speaker notes

Slide 1 note: State the scope as a comparison between Strava and Nike Run Club only. The first sentence should make clear that both products are mobile-first, but they represent different HCI priorities: broad social activity tracking versus running-specific coaching.

Slide 2 note: Explain that the team used official product, help, app-store, and newsroom sources first. Claims about recording, privacy, guided runs, training plans, live sharing, and metrics are cited rather than guessed from unsupported screenshots.

Slide 3 note: Emphasize context. The six personas are not demographic filler; each one defines motion state, lighting/noise, device state, attention level, and the user goal at the moment of interaction.

Slide 4 note: For Strava, focus on record start, privacy selector, route builder, segment leaderboard, and challenge progress. Tie every benefit or drawback to a screen and a concrete runner or cyclist scenario.

Slide 5 note: For Nike Run Club, focus on the start action, metrics screen, audio-guided runs, training plans, challenges, achievements, live sharing, and optional Apple Watch support. Make clear that audio guidance is both a benefit and a risk depending on noise and fatigue.

Slide 6 note: Explain why N-S1, N-S3, N-S7, and N-S9 are quick wins. They address missed instructions, beginner plan overload, live sharing uncertainty, and metric distraction exactly when the user is vulnerable.

Slide 7 note: Close with QA: source log refreshed, PDFs regenerated, extracted text scanned, and zip checked for four top-level PDFs.

Likely questions and prepared answers

Question	Prepared answer
Why compare Strava and Nike Run Club?	Both are mobile-first running products, but Strava is broader social/multi-sport tracking while Nike Run Club is more focused on running-specific coaching.
Which product has better beginner support?	Nike Run Club, because Guided Runs and training plans directly coach novice runners [9][13].
Which product has higher privacy risk?	Both have privacy risks: Strava route visibility can expose sensitive places, while Nike Run Club has less granular privacy controls.
Why is audio guidance an HCI benefit?	It moves feedback from vision to hearing, reducing visual demand while the runner is moving [9][13].
When does audio guidance become a drawback?	When noise, fatigue, music, or earphone problems cause missed cues during motion.
How did the team avoid generic analysis?	Each finding names a screen or flow, control, user, context, HCI concept, scenario, severity, and a specific user goal.

Mock feedback entries

Reviewer	Role	Feedback	Response/revision	Owner	Status
---	---	---	---	---	---

Nora Lee	Peer	Need clearer evidence for Strava privacy.	Added privacy controls citation and privacy receipt solution.	Member2	Done
Omar Khan	Peer	Nike Run Club audio guidance should be both benefit and drawback.	Split N-HCI3 and N-HCI4 with noisy-street scenarios.	Member2	Done
Jin Park	Peer	Beginner plan overload needs a persona.	Linked N-D2 to Anh and Minh.	Member2	Done
Mira Vo	Peer	Live sharing risk should name recipients and expiry.	Added N-S7 and N-S8 receipt/expiry controls.	Member4	Done
Sam Patel	Peer	Strava leaderboards need motivation framing.	Added S-HCI7/S-HCI8 and peer-band solution.	Member3	Done
Hana Lim	Peer	The comparison should not treat Nike Run Club as wearable-first.	Rewrote modality as mobile running coach with optional wearables.	Member3	Done
Leo Tran	Peer	Metric density should include road-crossing context.	Added N-D5 and N-S9/N-S10.	Member4	Done
Ivy Chen	Peer	Sprint plan should show source QA.	Added source collection, PDF text scan, and zip validation tasks.	Member5	Done

Rehearsal checklist

Check 1: The first slide names only Strava and Nike Run Club and defines Nike Run Club as a mobile-first running coach and tracking product.

Check 2: The method slide explains numbered citations and makes clear that the team avoided unsupported screenshots and generic claims.

Check 3: The persona slide shows that each persona has a context: where, when, posture, motion state, device state, connectivity, lighting or noise, interaction method, and attention level.

Check 4: The Strava slide includes at least one benefit and one drawback tied to record, privacy, route, segment, or challenge behavior.

Check 5: The Nike Run Club slide includes the required audio guidance, training plan, challenge, achievement, live sharing, metric density, and Apple Watch support findings.

Check 6: The solution slide does not list ideas without UI behavior. Every idea states the control, feedback, expected gain, and tradeoff.

Check 7: The closing slide mentions source refresh, Markdown regeneration, PDF regeneration, extracted-text scan, and top-level zip contents.

Check 8: The team leaves time for peer questions about beginner support, privacy risk, audio guidance, and evidence quality.

Presentation risk controls

Risk control A: If a reviewer asks why these two products were paired, the answer should point to shared running use but different HCI emphasis: Strava as social multi-sport tracking and Nike Run Club as guided running coaching.

Risk control B: If a reviewer says the analysis is too broad, the speaker should cite a specific screen or flow, such as Strava activity privacy or Nike Run Club live location sharing.

Risk control C: If a reviewer challenges audio guidance, the speaker should explain both sides: it reduces visual demand, but it can fail in noisy outdoor contexts.

Risk control D: If a reviewer challenges the solution feasibility, the speaker should separate quick wins from deeper redesigns and explain effort tradeoffs.

Risk control E: If a reviewer asks about missing real names, the team should state that placeholders are used until the group supplies the final roster.

Cue-card Q&A; details

Cue card 1: Beginner support. Nike Run Club should be described as stronger for beginners because Guided Runs and coach-created plans reduce the need to design workouts from scratch. The answer should also mention that too many plan choices can still overload a beginner.

Cue card 2: Privacy. Strava privacy risk is about activity audience and route visibility; Nike Run Club privacy risk is about live sharing recipients and sharing duration. The team should not collapse these into one generic privacy issue.

Cue card 3: Safety. Nike Run Club live location sharing is a safety benefit for Minh's night run, but it needs a visible stop state and expiry confirmation to avoid uncertainty after the run.

Cue card 4: Metric density. Both products show useful metrics, but Nike Run Club's during-run context is more sensitive because Sofia may inspect pace while moving quickly in sunlight near crossings.

Cue card 5: Audio. Audio guidance is valuable because it shifts feedback to hearing and keeps eyes on the road. It becomes a drawback when traffic, music, earphones, or fatigue prevent the runner from hearing a cue.

Cue card 6: Evidence. When challenged, speakers should name the exact citation category: official product page, support/help page, app-store listing, newsroom release, or official Nike running article.

Cue card 7: Solution realism. Quick wins are intentionally small UI changes, while deeper redesigns require sensing, state tracking, or motivation-model changes. This keeps the recommendation credible.

Cue card 8: Scope control. The presentation should not drift into broad brand strategy, apparel, hardware ownership, or unrelated fitness apps. The PA1 object is the HCI experience of Strava and Nike Run Club.

Revision log

Feedback was applied in this order: product-pair correction, evidence refresh, Nike Run Club personas/use cases, HCI finding rewrite, drawback/solution ID consistency, peer-review Q&A, weekly-report sprint tasks, PDF/zip validation.
