

PROJECT ASSIGNMENT 4 (PA4)

FIT-HCMUS - CSC13112 - UI/UX Design - Dr. Le Khanh Duy

Deadline: 2 weeks. Please check the submission link on Moodle.

Total points: 175/500

This is a teamwork assignment.

PA Schedule

PA	PA (500, subject to change later)
PA1	75 Product Research Potential Solutions
PA2	100 User Research, Vision Document Use Case Spec
PA3	150 Paper Prototype (2 scenario * 3 alternatives) Informal testing Points for improvements
<u>PA4</u>	<u>175</u> <u>Hi-fi Prototype</u> <u>Summative user study</u> <u>Presentation / Demo</u>

A. Objectives

In this PA, students are asked to create the high-fidelity prototype of the project, perform the summative user study and demonstrate the final product at the presentation sessions.

B. Requirements

Requirement 1: High-fidelity prototype

Your group chooses the best versions of the lo-fi prototypes in the previous PA and develops it into the hi-fi prototype (based on the formative testing results). If you are not satisfied with any of those lo-fi prototypes as each has its pros and cons, you can develop a new design based on the explored approaches and build a hi-fi prototype for it. To illustrate the interface, user flow, and user interactions of your solutions, you can use several prototyping tools such as Figma, Adobe Illustrator, Powerpoint or vibe coding... or implement it by writing code (creating a script for demonstration and not requiring dynamic data for this prototype).

You should consider several aspects of the high-fidelity prototype which is different from the paper prototype (low-fidelity prototype):

- Rich fidelity: detailed color, UI elements, animations...
- Realistic user interactions (touch, mouse, keyboard, ...)
- Content: you should use real or similar-to-real content. Please ensure the data should make sense for the chosen contexts.

The hi-fi prototype task must be completed before the presentation/demo date.

Requirement 2: Summative User Study

Your group is asked to plan and conduct a user study to evaluate your solution (hi-fi prototype). The requirements for this PA:

- Before the User study:
 - Create a plan in details for your study: setups, procedure, questionnaires, and study designs.
 - Invite at least 5 participants to test your prototype.
 - Tasks of each team member
 - The measures you use to evaluate your prototype.
- In progress:
 - Video-record all testing sessions
- After testing:
 - Gather feedback (through interview), insights or questionnaire answer from the participants
 - Collect other data (Ex: the time participant completed the specific task using your prototype and compare it to the current practice).

The user study task must be completed before the presentation/demo date.

Requirement 3: Demo

Your group is required to present their final product at the presentation sessions (to be announced later), within a 15 to 20-minute timeframe.

Requirement 4: Weekly Report

Your group must track each member's tasks using the provided weekly report template.

C. Grading Scheme

English/Vietnamese writing: clear and easy to understand with few errors.

Well formatted texts, diagrams, charts.

Any act of copying over 70% will receive 0 points of this PA.

- Requirement 1: Hi-fi Prototype (55%)
- Requirement 2: Summative User Study (40%)
- Requirement 4: Weekly Report (5%)

D. Documents to be submitted

- Requirement 1: GroupID-PA4-HifiPrototype.pdf. The first page must include the Youtube demo video links.
- Requirement 2: GroupID-PA4-SummativeUserStudy.pdf.
- Requirement 4: GroupID-PA4-WeeklyReport.pdf
